Efficiency without compromise

The all new energy engines revolutionise current standards. using innovative technology and our motor racing know how, Renault Clio is both fun to drive and leads the way in lowering fuel consumption and CO₂ emissions.

Stop & Start

Automatically turns off the engine when the Renault Clio is stopped and in neutral, cutting down on emissions, fuel consumption and noise. Restarts instantly, smoothly and without vibrations. (Available on all manual engines excluding 1.2 16V 75).

Energy Smart Management (ESM)

By recovering kinetic energy when braking and decelerating, ESM optimises the consumption of electrical energy and helps recharge the battery.

Active Air Shutters

Automatically adjust the flow of air through the radiator to the engine's cooling requirements, improving the vehicle's aerodynamics and fuel consumption.

ECO mode

To reduce fuel consumption even further, the driver can select ECO mode, which modifies the vehicle's acceleration, torque / power management and heating / air-conditioning (excluding 1.2 16V 75).

Overboost*

Innovative Overboost technology provides the ENERGY TCe 90 Stop & Start engine with increased levels of acceleration. With temporary additional torque and power, the Overboost allows more responsive starts from take-off and improved acceleration at wide open throttle. This improves both driving pleasure and confidence; facilitating exits at crossroads, merging from entry slip roads and overtaking.

*The Overboost is available on ENERGY TCe 90 Stop & Start engines.
Not available on ENERGY TCe 90 Stop & Start ECO versions.

* Official Fuel consumption figures are produced for comparison purpose and are measured according to the European Directive 80/1268/EEC. These figures are specific for a vehicle type and not for a single car. Real world fuel (actual) consumption can vary as the fuel efficiency of a vehicle is influenced by driving behaviour, weather and road conditions. The use of technical equipment for example air conditioning, can also affect the fuel consumption. For further information, please visit the Vehicle Certification Agency web site www.vca.gov.uk.
