DRIVING PLEASURE: WITH RENAULT

# ENERGY ENGINES

FLEXIBLE, EFFICIENT, ECONOMICAL: THE NEW MEGANE IS EQUIPPED WITH THE ENERGY ENGINE RANGE. WITH NO FEWER THAN THREE ENGINES DERIVED FROM FORMULA 1® TECHNOLOGY, THE NEW MEGANE COMBINES EXCITEMENT, ECONOMY AND A LIMITED ENVIRONMENTAL IMPACT. AND, GOING EVEN FURTHER IN THE QUEST TO BLEND PERFORMANCE, COMFORT AND ECONOMY, THE NEW MEGANE ALSO BOASTS A NEW TCE 130 EDC ENGINE.

## ENERGY ENGINES: MORE TECHNOLOGY, MORE PLEASURE AND MORE FUEL ECONOMY.

Energy engines offer a number of innovations designed to make driving an enjoyable experience while keeping fuel consumption in check. Dynamic, powerful, economical in terms of both fuel and CO<sub>2</sub>, these engines – some of which are taken directly from the world of Formula 1® racing – are highly responsive. In terms of driving pleasure nothing is left to chance, whilst their fuel consumption and emissions are on a par with the very best. Downsizing (capacity reduction), Stop & Start and a new energy recovery system on braking and deceleration (Energy Smart Management): innovations that allow the three engines to combine a reduced environmental impact with driving pleasure!

### A RANGE OF FOUR WIDELY-PRAISED ENGINES:

- ENERGY TCe 115 S&S: fuel consumption of 53 mpg / 100 km <sup>(1)</sup> and 119 g / km of CO<sub>2</sub> <sup>(1)</sup>
- ENERGY dCi 110 S&S: 80 mpg / 100 km (1) and 90 g / km of CO<sub>2</sub> <sup>(1)</sup>
- ENERGY dCi 130 S&S: 70 mpg / 100 km (1) and 104 g / km of CO<sub>2</sub> <sup>(1)</sup>

(1) Official consumption according to applicable regulations for New Mégane Hatch.

## WINNING DUO

**ROB WHITE**

Director  
of Renaultsport F1®

**GASPAR GASCON**

Director  
Renault Power Train Engineering

At Renault, technological innovation is driven by the passion of our employees. Rob White, Technical Director of Renaultsport F1®, works with his team to create the Renault engines that power a quarter of all Formula 1® teams. Winning engines for over 35 years! World champions 11 times. For production cars, Renault Power Train Engineering Director Gaspar Gascon and his staff develop the new ranges of Energy engines. Think the two are unrelated? Think again. On a day-to-day basis, Rob and Gaspar keep in touch, discussing and working together to develop new ideas, each benefiting from the other's know-how with the enthusiasm of natural-born pioneers. Their goal: to reduce fuel consumption and CO<sub>2</sub> emissions by 35%; test engine strength under extreme conditions and take the everyday pleasure of driving a Renault to ever greater heights. When two teams of engineers obsessed with innovation combine their efforts and share their expertise, the drive for creating some of the world's best engines is more than doubled.

Front and Rear parking sensors:** To help with parking manoeuvres, these proximity sensors warn you of any obstacles behind you through a series of beeps that speed up the closer you get. **3. The automatic headlights feature also adjusts between main and dipped beam, depending on the conditions. **4. ABS:** Anti-lock braking system (ABS) with electronic brake force distribution (EBV) and emergency brake assistance (EBA) to keep you in a straight line under hard braking situations. **5. Rear parking camera:** The reversing camera helps with manoeuvres. It complements the audio and visual sensor aids at the back. **6. Protection of occupants:** The programmed safety system includes a full set of airbags and sensors for side impacts. The Fix4sure technology, a result of Renault's innovation, is designed to stop submarining (where, during a frontal impact, the passenger slides under the seatbelt). The Fix4sure system efficiently protects everybody and provides maximum safety thanks to a special boss in each seat base.

\* Official Fuel consumption figures are produced for comparison purpose and are measured according to the European Directive 80/1268/EEC. These figures are specific for a vehicle type and not for a single car. Real world fuel (actual) consumption can vary as the fuel efficiency of a vehicle is influenced by driving behaviour, weather and road conditions. The use of technical equipment for example air conditioning, can also affect the fuel consumption.
